How to build the best paper airplane in the world

... continued from steps 1 to 12

13. Fold the left hand point back.

14. Crease

15. Mirror the same folds on the right panel.

16. Bend the left panel as shown.

17. Crease from back to front only 2/3 of the way.

Note: to see a **complete video of the folding instructions**, go to [Paper Airplane Google Video](#). You can start and stop the video as needed to help while folding. *The link will open a separate window.*

I have received a large number of requests for clarification of steps 17 and 18. For detailed instructions of steps 16, 17 and 18, go to [detailed instructions](#). For additional help go to the [animation](#) to view an animated sequence of these folds. You can also view a [Flash animation](#) if your browser is equipped with a **Flash plug-in**.

18. Study photos 18 and 19 carefully. These folds are difficult to describe. Try to duplicate them as shown in the photos.

19. Mirror the folds on the right.

20. Turn the plane over and fold the point back and crease as shown.

21. Turn the plane over again. The result should be similar to the photo.

22. Crease wing as shown.

23. Moisten the crease with your tongue. Do this **slowly and carefully** or you could receive a painful paper cut on your tongue.

24. Carefully tear off strip of paper. **Save the strip of paper because you are going to need it to make the tail.**
